Leverage Our Strengths

By partnering with IDT, you can join forces with a carrier who:

- Features the global partner network and economies of scale to provide the best available market rates
- Provides managed Quality of Service (QoS) at various levels to meet your customers' expectations
- Works with you to increase your revenue by delivering IDT retail and wholesale traffic directly to your network

Partner Benefits

IDT enables you to strengthen your bottom line and deliver best-in-class voice termination services:

- Improve operational efficiencies
 - Decrease call completion costs by leveraging our global relationships and vast network of interconnects
 - Minimize the operating expenses required to implement and manage worldwide direct interconnects
 - Increase revenue by receiving traffic directly from IDT
- Increase your Quality of Service (QoS)
 - Our Total Quality Management (TQM) systems, policies, procedures and resources ensure your customers receive consistent QoS
 - QoS thresholds and procedures are tailored for each service level (Platinum, Gold, Silver, Bronze)
 - Routing attributes and policies are customized for each service level
- Minimize network transfers
 - Access to 400+ fixed and mobile operators in over 100 countries
- On-line fault desk reporting and management

Voice Termination Services

About IDT

IDT Corporation, Inc. (NYSE: IDT) is a multi-national telecommunications company. As one of the largest international voice operators worldwide, IDT has relationships with hundreds of international carrier partners. A pioneer of VoIP telephony, IDT released its first PC to Phone technology in 1996 and Phone to Phone model in 1997. IDT is also one of the world's largest debit/prepaid platform operators, selling millions of prepaid calling cards per month.

Our four levels of service enable you to select an optimal solution for terminating your global traffic:

Platinum Routing

IDT Platinum Routing is ideal for network operators whose retail subscribers demand the highest quality and enhanced features (such as CLI) with competitive market rates.

- Direct route management
- CLI-certified routes
- Transparency of ISUP signaling for roaming (OCN & RDN)
- Proactive management of QoS parameters (jitter, route stability, ASR, ALOC, CCR)

Gold Routing

Gold Routing is designed for network operators whose retail subscribers expect high QoS at competitive market rates.

- All destinations terminate via stable, high-quality providers
- CLI and signaling features supported on the IDT network
- Proactive management of QoS parameters (benchmarked against in-country network operators)

Silver Routing

Our Silver Routing is popular with providers whose wholesale and retail customers require stable QoS with aggressive market-based pricing.

- Route stability with aggressive pricing
- Proactive management of QoS parameters

Bronze Routing

Bronze Routing offers the most affordable international termination and is designed for providers whose wholesale and retail customers demand the best available rate.

- Best available market price
- Wide range of termination destinations
- Granular code level destinations
